

THERMALLY MODIFIED WOOD

Select Cut® ThermalGuard by PureWood® begins as natural, renewable lumber. Using state-of-the-art thermal modification technology, each ThermalGuard board is dried to reduce moisture content. This process has been proven to preserve the material for up to twenty-five years without the need for chemical additives. Our unique engineered profile accommodates a hidden fastener system that is simple to use and easy to install. ThermalGuard is further enhanced with a factory-applied, premium sealant specifically designed for ThermalGuard. This rich looking, real wood product offers remarkable resiliency to rot, decay, and other elements. ThermalGuard by PureWood® is an impressive alternative to cedar and more cost effective than most composite decking products. It is the ideal choice for your next decking project.

Side Grooves

• Accommodates hidden fasteners

Factory-Applied Premium Sealant

biewerlumber.com

Select Cut® ThermalGuard by PureWood® has a factory-applied, premium sealant (PWS by PureWood) specifically made for ThermalGuard. In order to protect ThermalGuard from the natural weathering process or silvering of product due to sunlight, PWS should be used prior to or immediately following installation. Use of any other product will void the terms of the warranty. Visit biewerlumber.com or purewoodproducts.com for more information, product availability & warranty specifications.
